

Next generation access and visitor management

Driving operational efficiency at every site
and giving you the flexibility to adapt

VisitorPoint

Quanika

ADAPT FAST TO CHANGING PREMISES REQUIREMENTS

As your organisation increasingly faces new challenges in the way it uses its buildings, Quanika VisitorPoint gives you the power to adapt and manage your sites more efficiently.

Quanika's proven technology lets you transform your visitor and employee experience – and your wider operations - by combining your security, safety, reception, and analyst functions in a single, powerful, flexible solution.

With VisitorPoint, you'll know exactly who is on site, where they are and when their access authorisations apply, for both your physical spaces and your corporate networks.

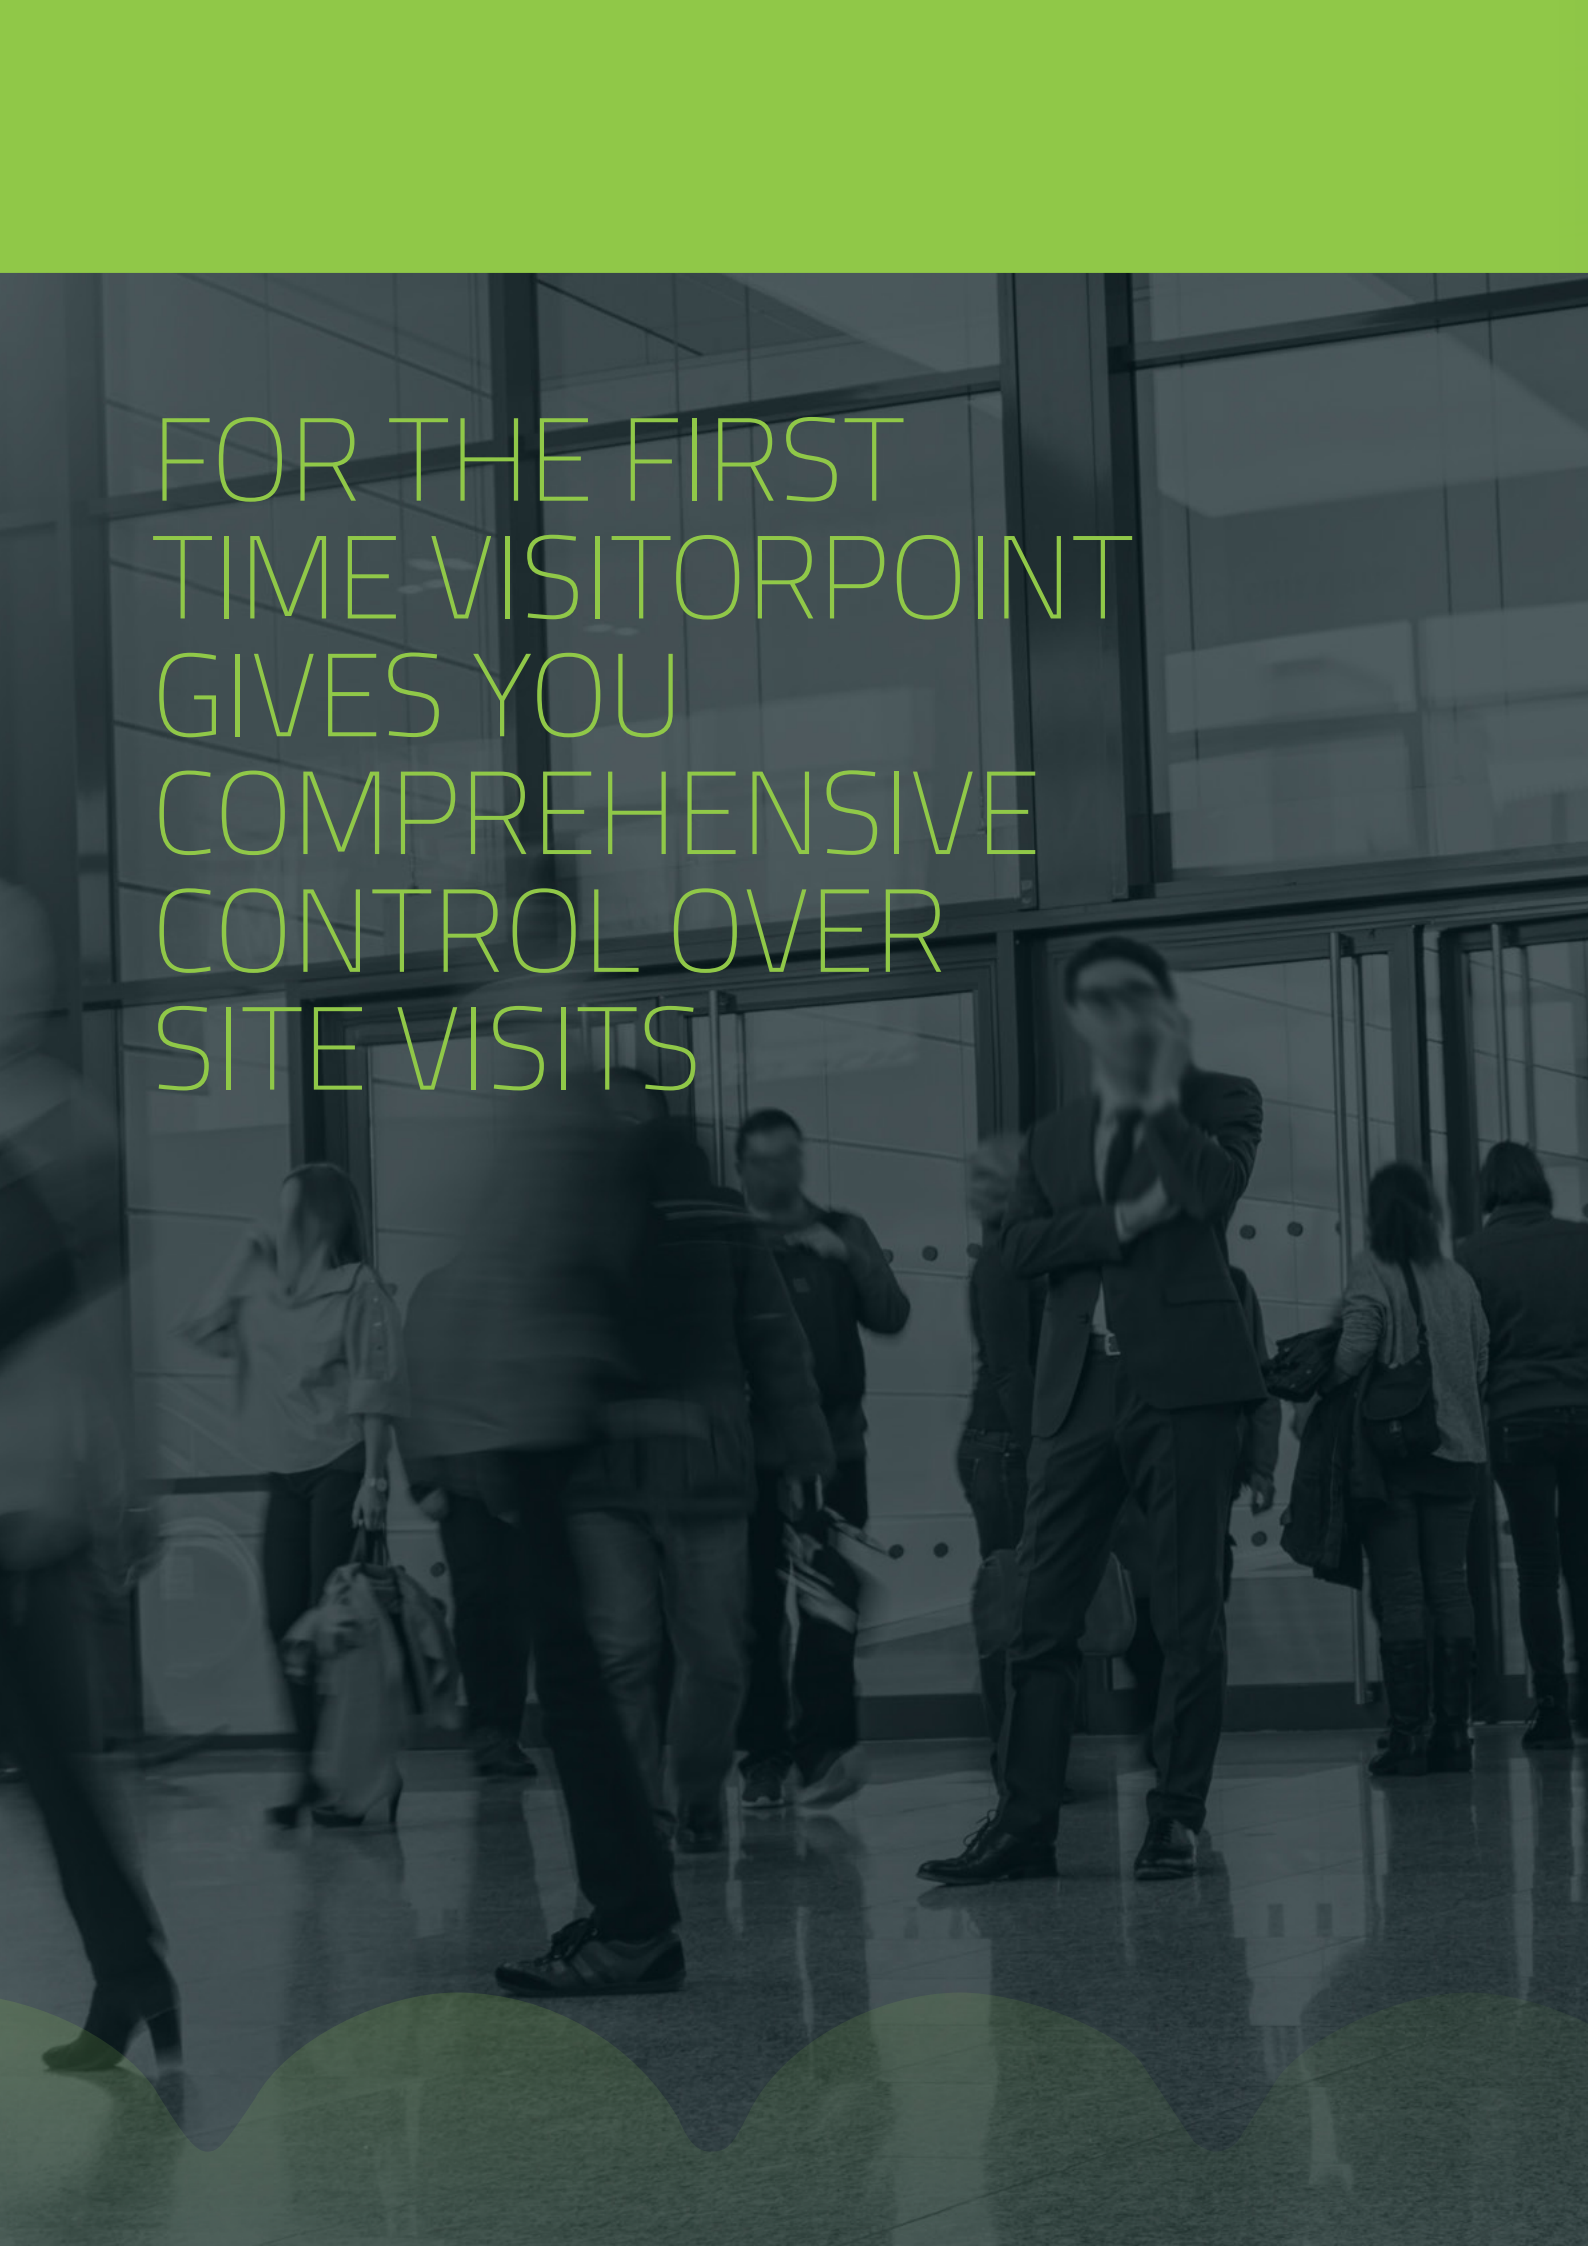

Make the best first impression – every time

With VisitorPoint you can make sure your staff, contractors and guests enjoy a smooth, hassle-free welcome every time they arrive on site. With delay-free access, clear information and helpful signposting delivered in advance, and no longer any need to wait in busy reception areas, you know they'll be impressed even before they arrive.

VisitorPoint will enhance your organisation's efficiency

- Easing pressure on front-line reception and security teams
- Boosting productivity in the way your people use your facilities
- Letting you flex and adapt to rapidly changing building use requirements.

FOR THE FIRST TIME VISITORPOINT GIVES YOU COMPREHENSIVE CONTROL OVER SITE VISITS

A remarkable transformation – for your people and your operations

Quanika VisitorPoint liberates your organisation from the old constraints that come with managing multiple premises and people.

It sets you free from cumbersome visitor sign-in books, and siloed record systems. And it integrates with Microsoft's Active Directory and other widely used databases, together with Outlook, to allow all your visitor processes to be automated, securely.

You'll no longer be told that your visitors are being frustrated by delays. Or have

to worry about your reception staff struggling under pressure.

And you won't always be wondering if your premises and network security is being compromised by weak points in your systems.

With VisitorPoint you have the reassurance of comprehensive control – for all your access and visitor management, for all your sites and premises, across your whole operation.

**IMPRESS YOUR
VISITORS AND
STAFF WITH THE
MOST EFFICIENT
EXPERIENCE**

VisitorPoint is tailored to your needs at every site, with its powerful suite of visitor and access functions

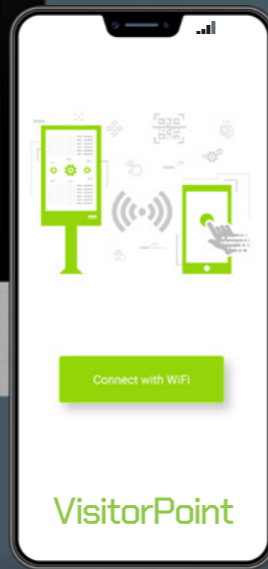

As your organisation increasingly faces new challenges in the way it uses its buildings, Quanika VisitorPoint gives you the power to adapt and manage your sites more efficiently.

Quanika's proven technology lets you transform your visitor and employee experience – and your wider operations – by combining your security, safety, reception, and analysis functions in a single, powerful, flexible solution.

With VisitorPoint, you'll know exactly who is on site, where they are and when their access authorisations apply, for both your physical spaces and your corporate networks.

VisitorPoint

A more flexible approach to streamlining and automating visitor management

Quanika VisitorPoint gives you a flexible array of tools and functions to let you optimise operations in the way best suited to every site.

And it integrates seamlessly with established business processes and software – including Microsoft Outlook – making it easy for all authorised members of your management teams to use it.

From booking meeting rooms and sending visitor access permissions to guests, to allocating courtesy parking, VisitorPoint puts your people in control and lets them work more efficiently.

And it lets your organisation adapt to changing workflows and patterns of building use, with the ability to automatically update access permissions from your central staff database.

The most powerful but simple solutions for your site

How VisitorPoint can ensure smooth and efficient access

Use VisitorPoint to easily book meetings (through Outlook), and send confirmations with QR codes

When a visitor arrives they present the QR code to the IP intercom and reader for rapid access

At reception, you can choose between allowing visitor self-enrolment or requiring manual ID checks before admission

The relevant host has already been automatically notified to come and meet their guest – visitors use their own QR code to gain access via AXIS Door Station

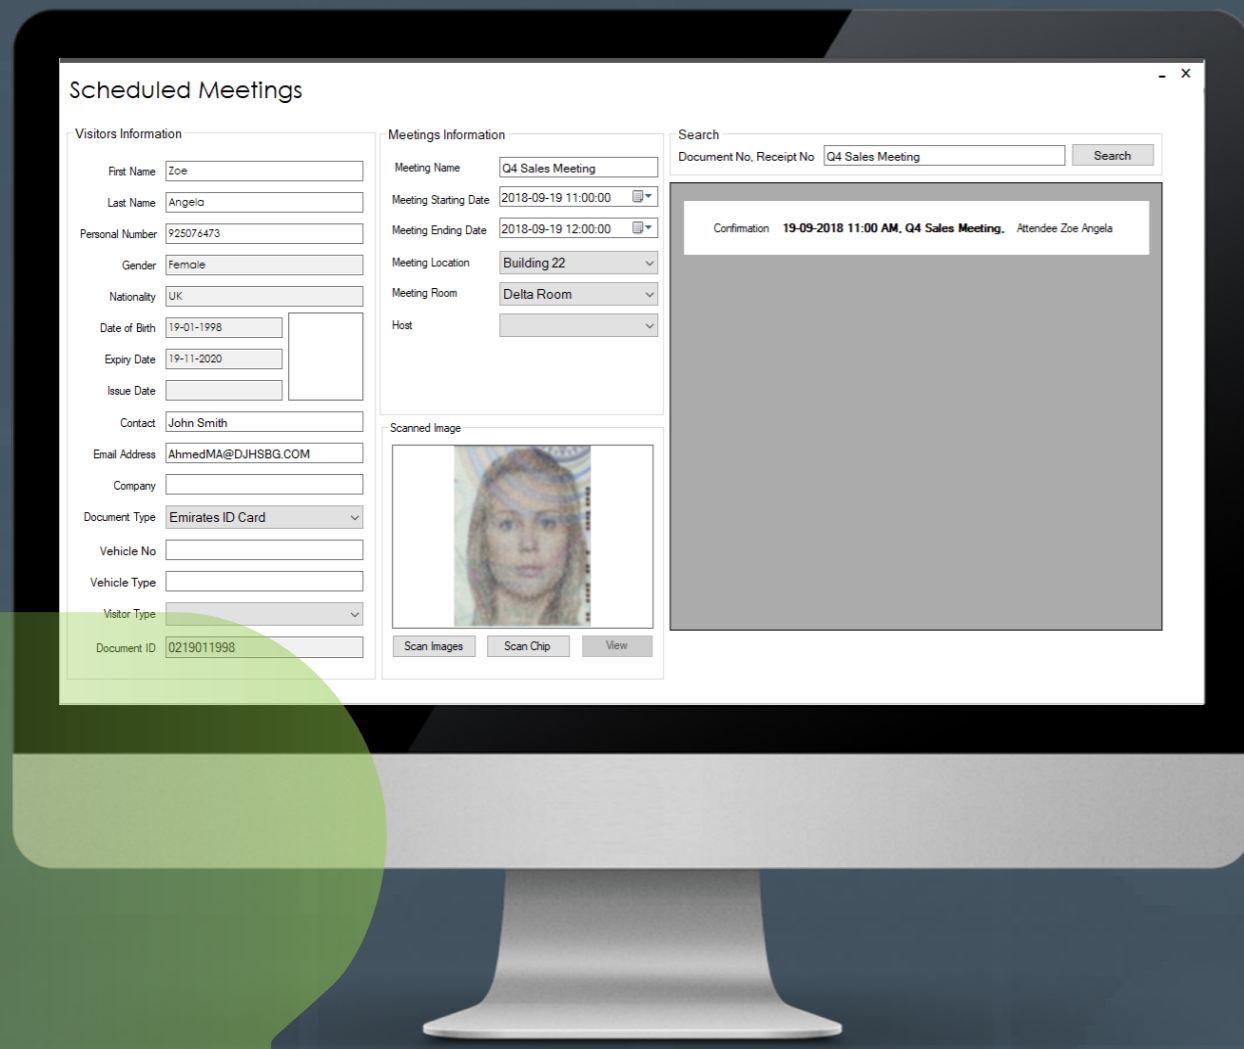

Ensure smooth running for complex and multi-site operations

Quanika VisitorPoint allows staff and contractors to be more easily assigned to flexible working locations – with updated, site specific information sent in advance. QR codes can be presented to access readers, video intercoms and self-service kiosks.

Meeting rooms and other facilities can be reserved and allocated, network access

can be enabled, and staff can work more flexibly with more efficient scheduling.

Quanika VisitorPoint does more than just secure your premises and enhance your visitor experience, it drives up efficiency and productivity at all your locations. At a time of such unprecedented challenge and rapid change, this has never been more important.

High-level visitor security for mission-critical sites

Mission critical applications: managing contractors securely with facial recognition tracking

VisitorPoint is used to easily book contractors (through Outlook), and send confirmations with QR codes

When the contractor arrives LPR/ANPR allows rapid access, followed by manual ID checks at reception

The contractor is enrolled via facial recognition to allow movements to be tracked and reported

Improving arrivals efficiency across all your sites

For multiple locations and branches: how VisitorPoint approvals arrivals efficiency between sites

VisitorPoint is used to schedule staff movements between specified locations (through Outlook), and send confirmations, with vehicle registration details, QR codes etc

When staff arrive, they present their QR code to IP intercoms, kiosks or tablets for rapid access to facilities and authorised networks

Meetings can also be pre-booked, rooms reserved, and colleagues notified when that staff member arrives

If staff are enrolled on facial recognition, their movements can be tracked and audited

Managing higher risks: choose the security level you need

Quanika VisitorPoint lets you set your security level exactly according to your risk, and allows you choose how your visitors are welcomed.

For example, when vehicles arrive, ANPR allows first level automated identification at the perimeter, followed by driver and passenger ID checks. If required, this can be backed up by enhanced verification at reception, with facial recognition technology.

And when visitors are enrolled via facial recognition, this allows their movements to be tracked and monitored around your sites, with full audit trails for verification of events.

Meanwhile when visitor arrivals to meeting-only areas present lower risks, rapid but secure access can be enabled simply by scanning the pre-issued QR codes.

Automated and secure flow of goods

Easier deliveries with number plate recognition

VisitorPoint is used to book deliveries and collections, automating confirmations with vehicle registrations and sending associated QR codes

When the contractor arrives ANPR allows rapid access, followed by manual ID checks at reception

At the loading area the QR code is scanned for confirmation of the delivery or collection

Smoother arrival and enhanced welcome for VIP visitors

VisitorPoint is used to easily book VIP visits

When the VIP guests arrive ANPR allows priority access to site

You can choose how your VIP guests are welcomed at reception, with courtesy ID checks or other verification such as facial recognition before admission

Meanwhile the relevant hosts have already been automatically notified to come and greet their guests – visitors use their own QR code to gain access

Transform performance and operational efficiency, and enhance your visitor and employee experience

VisitorPoint's functionality lets you automate pre-screening of visitors, contractors, and delivery drivers, and optimise the entire visitor management process, from frictionless access to recording movements and dwell times around facilities.

- Visitors and staff can automatically receive secure one-time QR codes via email or mobile apps, ahead of every visit.
- Updated site information and health & safety instructions can be sent ahead too, with acknowledgement required.
- On arrival, clear messaging can guide the visitor from allocated car parking or transport links to the correct entrance.
- At the appropriate entrance, visitors and staff can use contactless kiosks or anti-viral touch screens to gain access, and they can be provided with courtesy hand gel and hygiene reminders whenever infection risks need to be reduced.
- Permit frictionless and even contactless access with multi-factor authentication.
- Hosts can be automatically informed of guest arrivals in good time to ensure an efficient welcome.
- Meeting rooms and other facilities can be reserved, and schedules managed efficiently.
- Staff can work more flexibly, moving from location to location without the need to visit security in person every time – and access to premises and networks can be granted, or denied, according to current operational status.

Pivot your operations more quickly – and be ready for new, emerging challenges

Seamless integration with AXIS A1001 and A1601 Network Door Controllers and AXIS Door Stations lets you manage and monitor all access points and entrances more easily than ever before.

Quanika's comprehensive software licence covers unlimited doors and cameras. Interactive graphical floor plans help the operator navigate the site. The system also allows for elevator control and unlimited inputs and outputs from readers.

CREATE A SAFE,
SECURE, AND
MORE PRODUCTIVE
WORKING
ENVIRONMENT

VisitorPoint ensures that you

- Adapt to meet changing site occupancy requirements.
- Maintain immediately accessible records of who has been on site, and when.
- Keep up to date with changing access authorisations, no matter how fast-moving or complex.
- Create a safe, secure, and more productive working environment for staff, contractors, and visitors.
- Optimise your reception and security operations to ease pressure, ensure smooth people-flow, and make the best use of resources.
- And above all Quanika VisitorPoint gives you unprecedented control of how people access your sites, making it easy to pivot your operations from week to week, from day to day, to face the future with confidence.

Tomorrow's Security Solutions Today

Why Quanika

Working for major corporate enterprises globally, Quanika operates at the forefront of systems integration, developing the most capable, open architecture software solutions available today.

Whatever size your operation, whatever challenges you face, we'll strengthen your business with all the advanced capabilities you most need, seamlessly and affordably.

Quanika works with industry-best technology leaders to deliver high-level control, as never before.

We strip away the complexity and deliver on the promise of affordable integration.
